4 Goals for our Project	2

1 Introduction

We are going to take the topic “Sports” from the topic list.

2 Content

Our static Website will contain the following things:

We will

- Present different types of sports.
- Outline the benefits of doing sports.
- Illustrate the negative aspects of being a couch potato.
- point out the importance of having a balance between physical and mental activities.
- suggest some places where certain types of sports can be done.
- point out the importance of having a good diet
- show some good exercises to stay fit and to stretch

3 The Web Application

Also, later that year, we will implement a little game programmed with JavaScript. It will be based on the oldest game that ever existed, which is named Pong. It will be table tennis themed. You can move the rackets left or right to hit the ball. The ball is going to hit the wall and will come right back to you. With every hit its getting faster. So people can battle around the highscore.

4 Goals for our Project

Our main goal for the Project is to bring sports in general to the people. In our generation there are way to many people who are just hanging out inside on their phone or PC. We think that’s not how it should be.

5 Time plan

We will try to finish the structure of the static Website within this semester. Then we can concentrate only on things like the Web App and designing our page in the second semester. It should be completely finished by the end of this school year.
